PRODUCED

Optimum protection - FFP2

OPTIMUM is a tight-fitting mask designed to create a seal between the mask and the face. It ensures effective two-way protection by filtering the air being inhaled and exhaled, protecting both the user and their surroundings. Low-cost face masks only offer one-way protection from an infected person to others, and thus do not protect the user.

OPTIMUM consists of three layers of Danish-produced nanofibre material. The outer layer acts as a moisture-repellent, the middle layer filters viruses, and the inner layer is made of a soft material which makes the mask comfortable to wear against the skin.

OPTIMUM has been tested by an independent laboratory and is approved by the Danish Safety Technology Authority, and has been in use in the Danish health service since spring 2020.

Reusable

The mask can be removed and put on several times during the day.

Breathable

Can be used during physical activity without impeding breathing.

Two-way protection

Protects both the user and the surroundings.
